Diesel Fuel Price Trends U. S. retail diesel prices decreased -0.6 cpg for the week, ending 05Aug13. Prices increased +1.8 cpg in the Rockies with the West Coast up less than +0.5 cpg. All other regional markets saw small price declines of less than -2 cpg for the week.

The U.S. average retail diesel price compared to Gulf Coast wholesale market decreased -1.4 cpg on the week. The spread ended the week at a level that matched highs of the last 4-yr for this the period.

The national average on-highway price ended the week +6 cpg above a year ago. The highest retail prices were in California and New England at \$4.13/gal and \$4.06/gal; respectively. The lowest prices were in the Gulf at \$3.84/gal and lower Atlantic at \$3.85/gal. Prices in the Gulf

prices in regional markets including the Central Atlantic and Lower Atlantic regions remain below the 5-year range. The spread between the U.S. average price and regional prices are all within the 5-year range, with the exception of the Central Atlantic and Lower Atlantic regions.

Gulf Coast wholesale distillate prices increased +3 cpg last week, ending at a level just below 3-month highs.

The spread between Gulf wholesale and U.S. average retail prices increased decreased -1.4 cpg to 89 cpg last week. Look for the retail to wholesale price spread to trend lower over the next 30-days on seasonal stock building at the wholesale level.

Supply - Demand Fundamental Trends

Distillate wholesale demand fell -0.3 million bpd last week but remains very robust; driven by higher domestic use, increased exports and downstream stock rebuilding. Demand for the latest 4-wk period was +527,000 bpd above a year ago.

Supply decreased -224,000 bpd on the week, due to lower production. During the latest 4-wk period, production was +299,000 bpd above last year while imports were +24,000 bpd higher.

and Southeast are the lowest in the country due to very high Gulf production. Rocky mountain prices are rising at an above average rate on low production and peak seasonal demand.

The spread between the U.S. average price and

Stocks decreased -0.5 million barrels last week on lower supply and robust wholesale demand. The latest 4-wk stock change in +5.4 million barrel build, matching 5-yr lows for the week.

Global Trends Driving Diesel Prices

Political uncertainty in Egypt with potential disruption of shipping on the Suez Cannel continues to support global oil prices. Partially offsetting this risk has been a return to operation of export terminals in Libya which increased global supplies +700,000 bpd.

Global economic fundamentals remain weak with recession in Europe, slower economic growth in China and only modest growth in the U.S.

U.S. distillate demand continues to exhibit strong year on year growth. The +15% increase in year on year demand reflects very weak demand comparison to last year, increased domestic use, stock rebuilding in the downstream supply chain and higher exports. Look for a seasonal decline during the next 60-days. Combined with high seasonal production, expect an above average rate of stock building.

These fundamentals point to risk of price weakness during the next quarter. Potential for hurricane storm supply disruptions represent upside price risk.

Diesel Price Outlook Look for retail prices to trend slightly higher this week on the increase in wholesale prices. Peak seasonal demand in the Rockies is driving above average price increases in that region. Very high production in the Gulf offset the increase in exports, constraining on-highway prices in Southeast and Gulf regions.

Glossary and Definitions Weekly Diesel Price -Fundamental Trends Report

U.S. Energy Information Administration: Source of weekly supply -demand diesel (distillate) fundamental data gathered through weekly survey of refiners, blenders, marketers, distributors.

Weekly Retail On-Highway Diesel Prices: Prepared by the EIA through a weekly survey of retail diesel marketers conducted each Monday. Many transportation firms use this data source to set fuel surcharge rates.

Gulf Coast ULSD (ultra low sulfur distillate) Spot Market Prices: Daily price data provided to the EIA by Thomson Reuters. Weekly data is an un weighted average of the daily prices.

Regional Markets: The EIA has defined five regions called PADD's for Petroleum Administration for Defense Districts which are used to aggregate weekly supply demand fundamental statistics as well as retail On-Highway diesel prices. Those regions are illustrated on the U.S. Map, Page 2 of this report. In addition the EIA provides prices for the state of California, and three sub regions of PADD 1; New England, Central Atlantic and Lower Atlantic.

On-Highway Diesel Price less U.S. Average: This is the difference between the specific regional market and the U.S. Average price. The variance reflects differences in refining cost, wholesale distribution cost, product grade specifications, taxes, and market power by marketers to set prices.

Temporary variations also reflect the relative supply -demand balance; for example during periods that Eastern Canadian refiners are down for maintenance diesel supplies in the New England Region may become very tight, thus driving up the premium that New England prices have over the U.S. average price.

This difference also reflects the '**basis risk**' which a transport firm operating in a specific region experiences if using the U.S. Average price to hedge fuel cost or set fuel surcharge rates.

Week ahead On-Highway Retail Diesel Price Forecast: Prepared by Fundamental Petroleum Trends Reports using spot and futures market prices as reported by the EIA, and seasonal indices in proprietary statistical models.
